

CATALOGUE OF RESOURCES & INITIATIVES 2024

Youth4Cyber

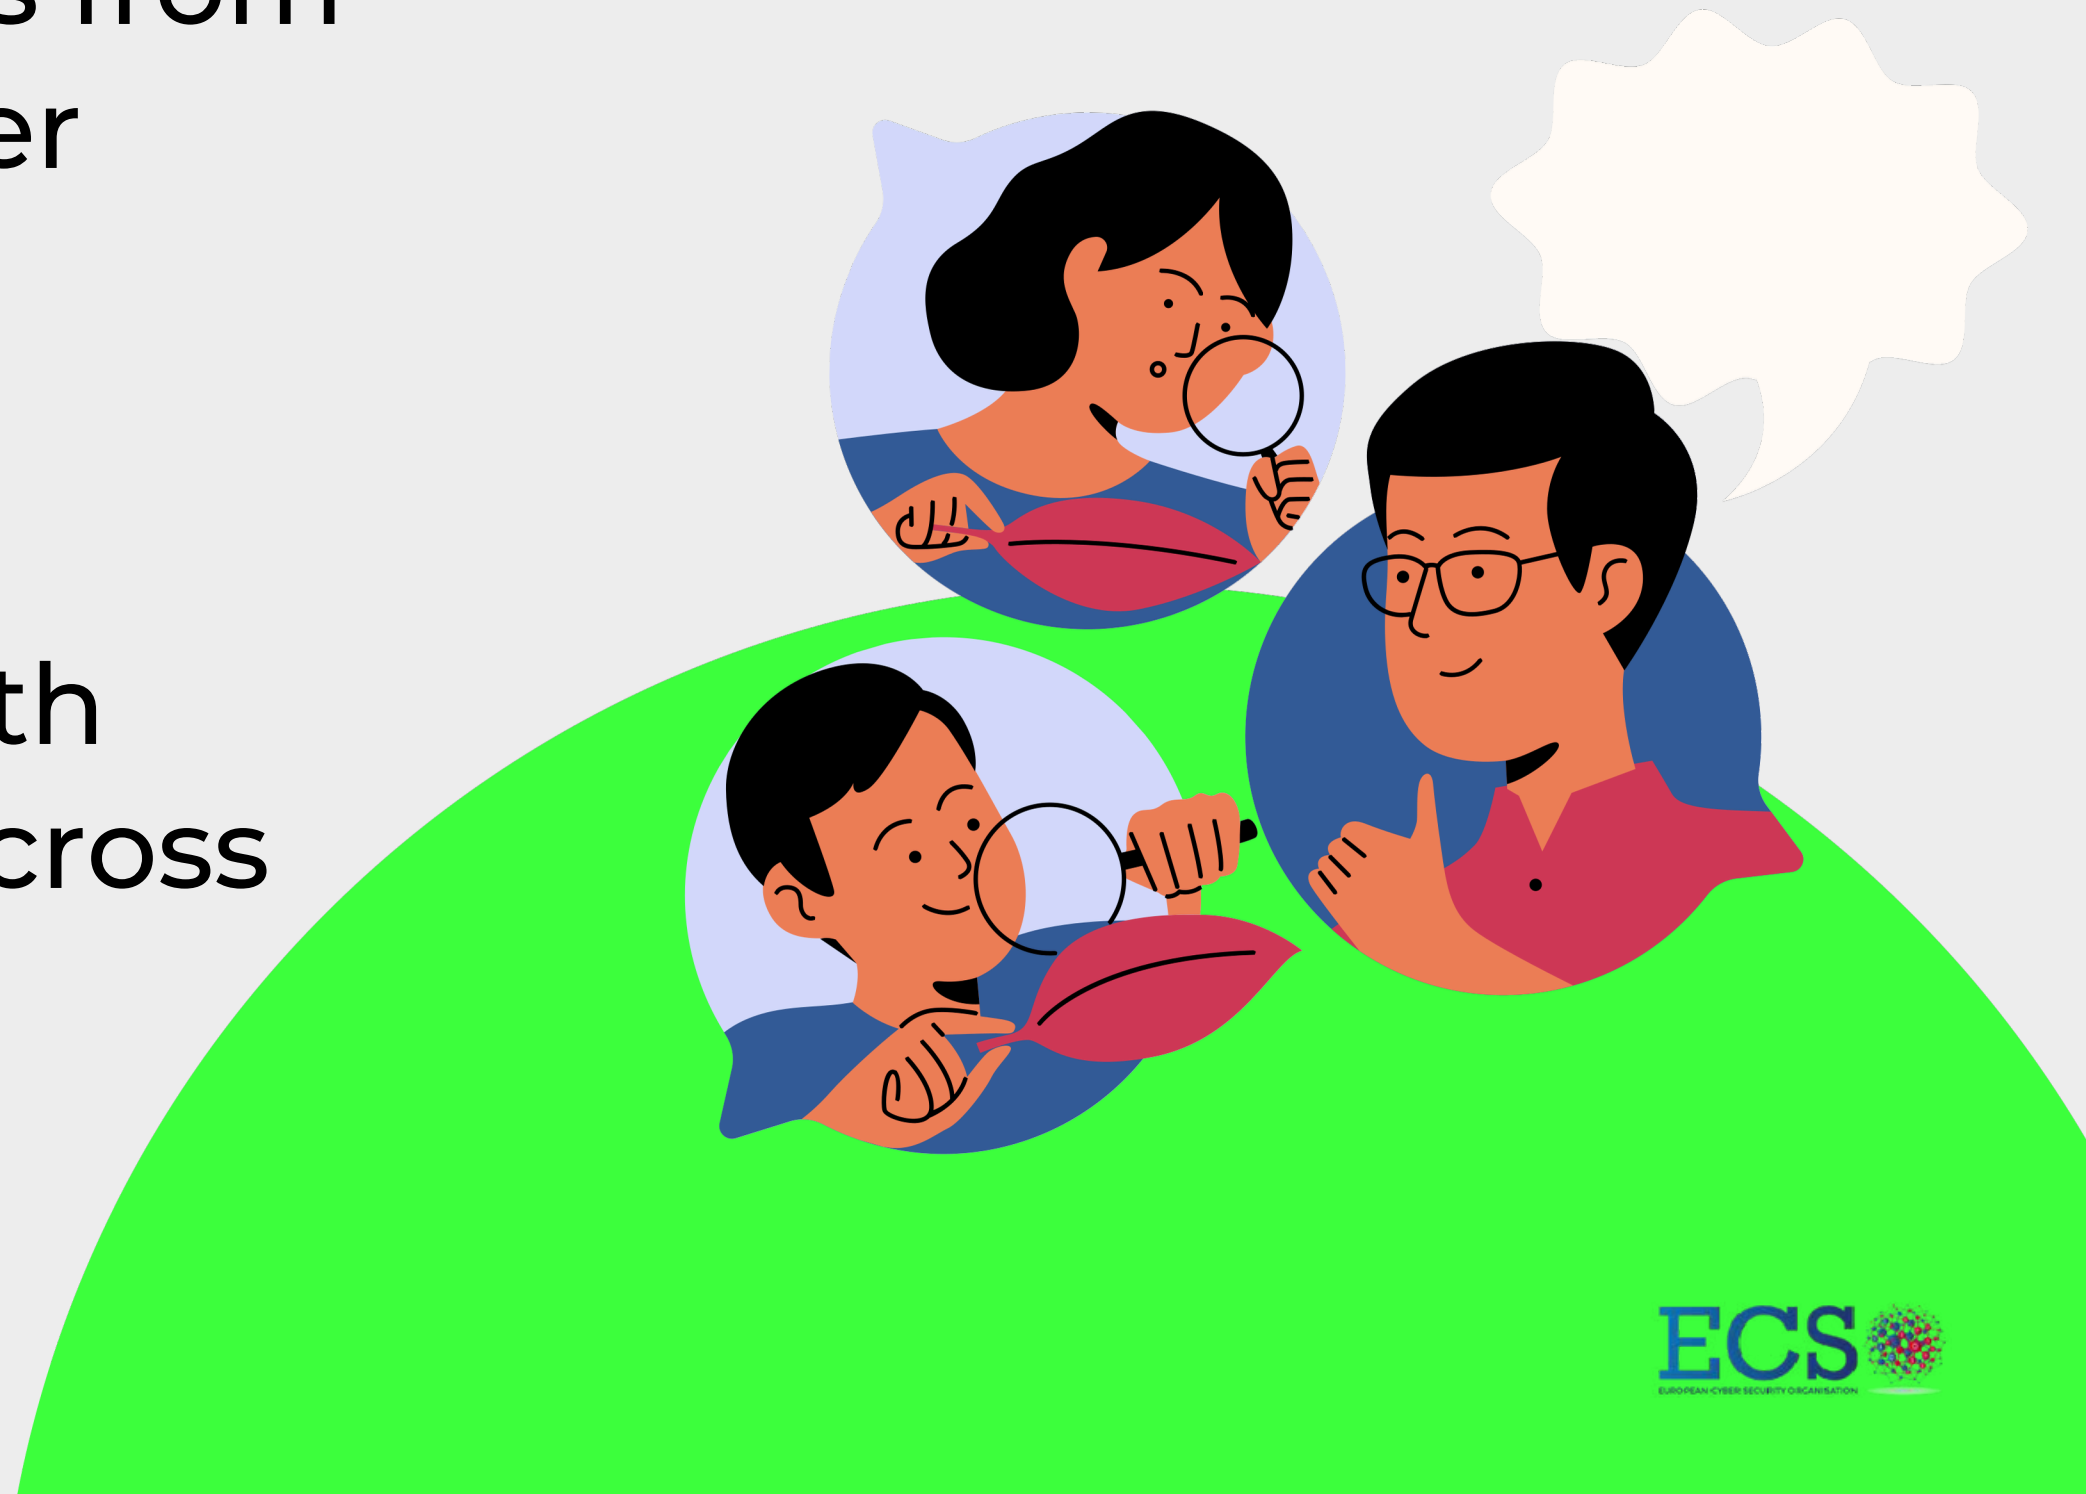

aims at educating and raising the awareness of young people (6 to 26-year olds) on cybersecurity.

In this living document

ECSCO is gathering a list of openly available resources/initiatives from ECSCO Members and the wider community.

Our goal is to show what is currently being done on youth education in cybersecurity across Europe.

**Here you will
find resources
divided by**

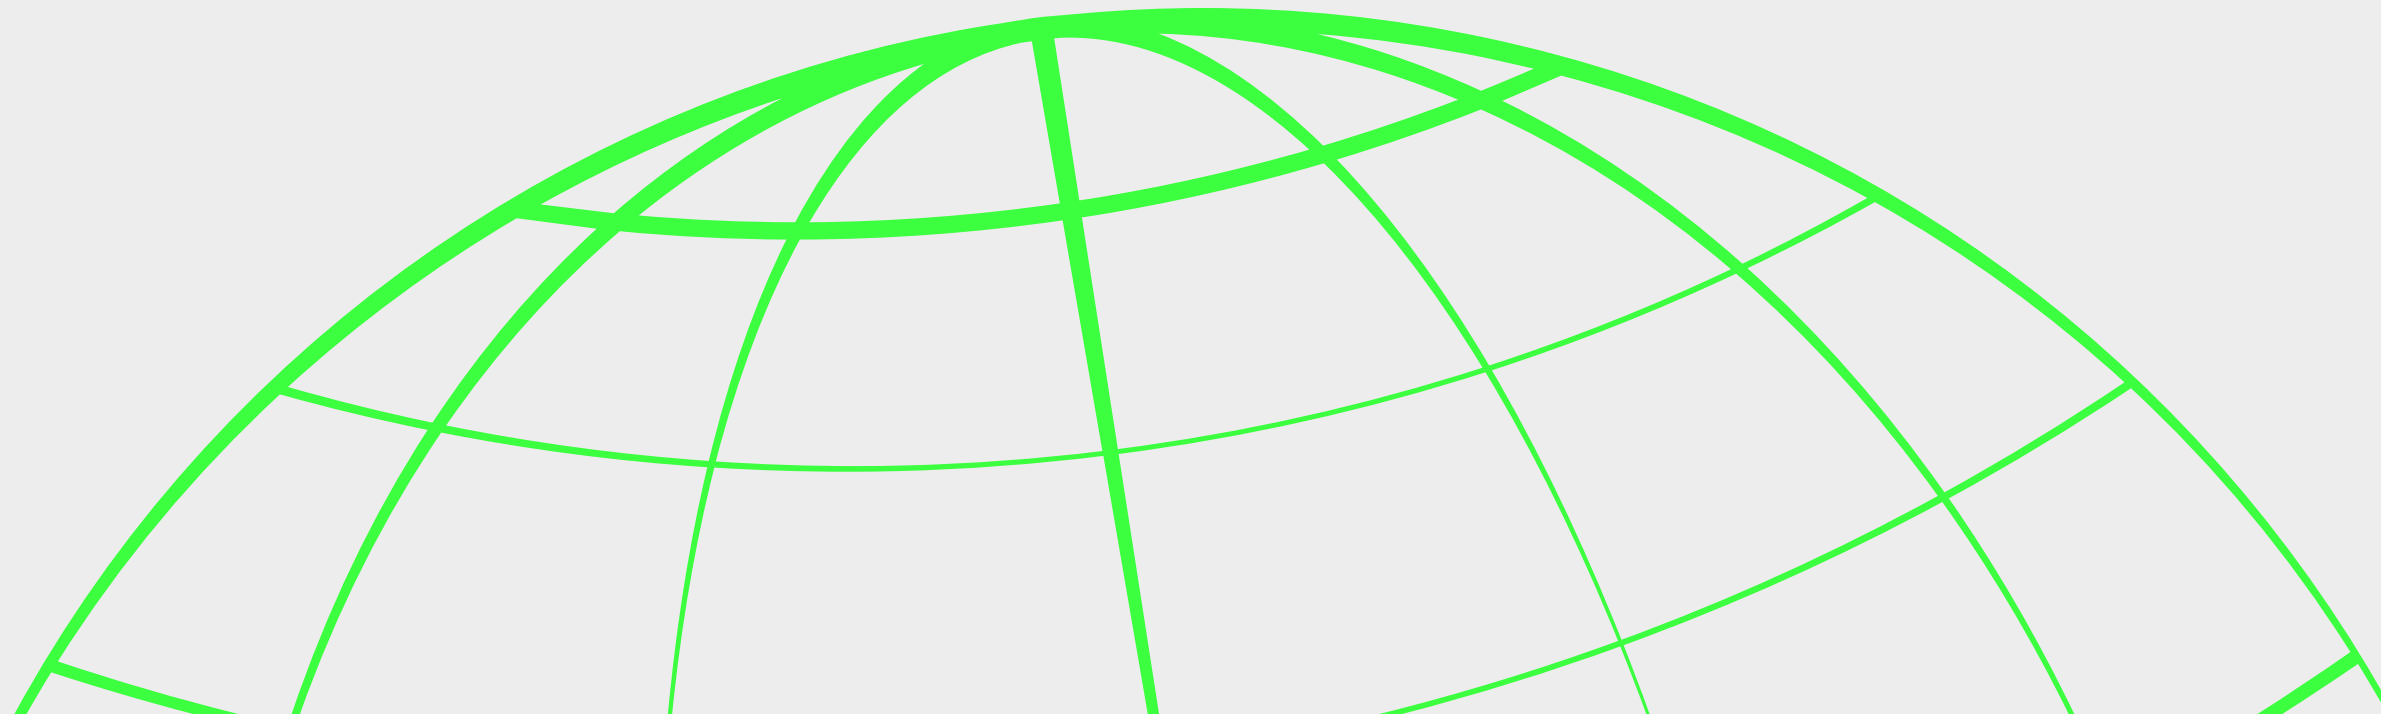

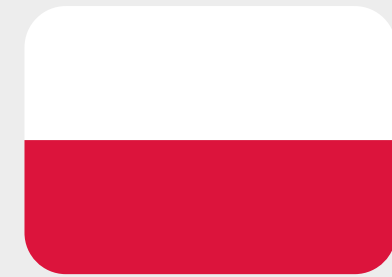

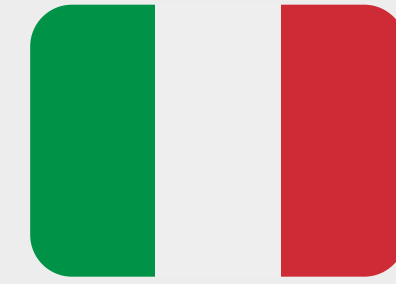

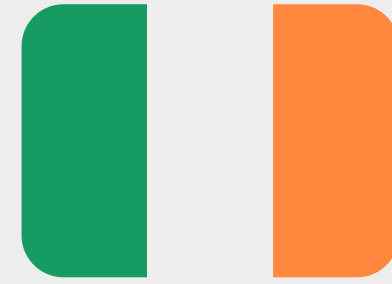

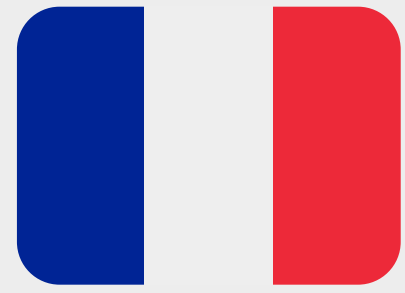

Type of resource / initiative

The image shows a grid of handwritten notes in French, organized into four columns: Herb(s), Goal(s), Friend(s), and Enemy(ies). Below the grid is a diagram with two circles labeled 'téléphone' and 'coque' connected by arrows to a central box containing the password 'Telec0quEphon3#'. The text below the diagram reads: "My hero is my **telephone (téléphone)** without a case. His goal is to find a beautiful phone **case (coque)** for him. His friend is going to help him and his friend is a touch tablet. His enemy, called iPhone, is the 2nd most used phone in the world. At the end of time, he will find the perfect phone case but his enemy was jealous so he bought the case before him. He was very sad and his enemy saw this so he decided to give him the phone case of his dreams and afterwards they became friends. END."

Hard-to-guess but easy-to-remember: understanding children's password security issues

Completed research project on cybersecurity awareness, more specifically to understand children's password security issues.

Research is done in English. Website includes additional educational resources and toolkits.

Ages 10-11
